# Overview

---

CM K2 Inline is a Joomla! component helping you customize K2 component's back-end item list and edit extra field inline.

## 1.1 Features

- Show/hide columns in K2 item list.
- Change ordering of the columns.
- Add columns for extra fields to the list.
- Add/edit value of extra fields in-place.
- Add/edit value of an extra field for many K2 items at once.
- Use AJAX to save extra fields.
- Popup notification for the result of AJAX request.
- Tool to create/delete override layout file right in Joomla! back-end.
- Support the following extra field's types:
  - Text field
  - Textarea (Editor is not supported)
  - Drop-down selection
  - Multi-select list
  - Radio buttons (Displayed as drop-down selection to save space)
  - Date
  - Link
- Integrate with [Additional Categories for K2 plugin](#)

## 1.2 Technical Requirements

- **Joomla! 3.x.x:** CM K2 Inline is **NOT** compatible with Joomla! 1.x.x or 2.x.x, only Joomla! 3.x.x is supported. Please check [Joomla! 3's Technical Requirements](#) for more information.

- **Bootstrap 2:** CM K2 Inline is **NOT** compatible with Bootstrap 3. Bootstrap 2 is available by default in Joomla! 3.x.x. The default template of Joomla! back-end (Isis) uses Bootstrap 2, so this template is recommended, if you use a custom back-end template, it must support Bootstrap 2.
- **K2:** CM K2 Inline was tested on K2 2.6.5, 2.6.6, 2.6.7, 2.6.8 and 2.6.9.

---

### Installation

---

Installation is easy, just like installing any other Joomla! extension. You just need to use the available tools in Extension Manager to install (Top menu -> Extensions -> Extension Manager).

Using “Upload & Install” tool to upload the ZIP package of CM K2 Inline to install is the easiest and fastest way.

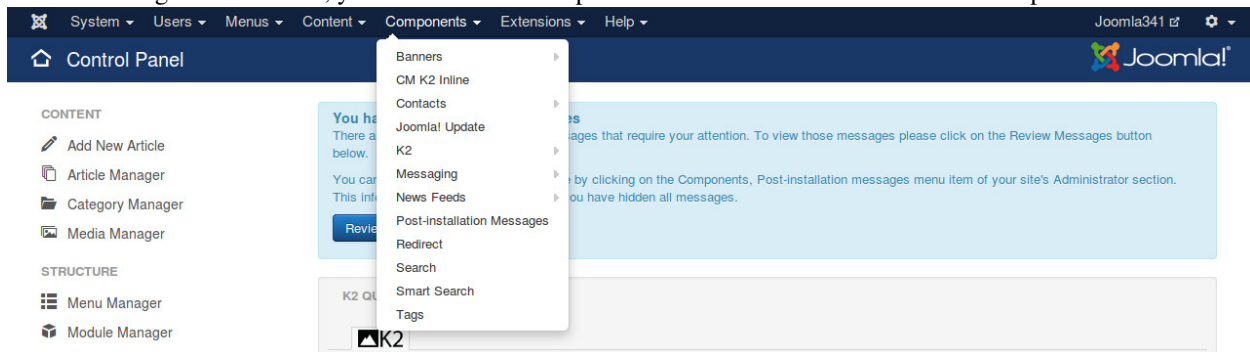

---

## Manage Columns

---

After installing CM K2 Inline, you can find it in Components menu item in Joomla! back-end top menu.

Access CM K2 Inline, you see the page to manage columns in K2 item list. The core columns which are displayed in K2 item list are created by default. You can't delete these columns but you can hide them if you don't need them in the item list.

View Site 0 Visitors 1 Admin 0 Log out Joomla! 3.4.1 — © 2015 Joomla!341

You can do the following actions:

- **New:** Create new column for extra field.
- **Edit:** Edit a selected column.
- **Publish:** Show selected columns in K2 item list.
- **Unpublish:** Hide selected columns in K2 item list.
- **Show on phone:** Show selected columns on mobile (by removing “hidden-phone” CSS class of Bootstrap 2).
- **Hide on phone:** Hide selected columns on mobile (by adding “hidden-phone” CSS class of Bootstrap 2).
- **Check-in:** Check-in a checked-out column (column is being edited and not checked-out).
- **Delete:** Delete selected columns.

## 3.1 Create new column

Click “New” button on the toolbar to create a new column, you see the form as the screenshot below.

System Users Menus Content Components Extensions Help Joomla341

CM K2 Inline: New Column Joomla!

Save Save & Close Save & New Cancel

Name \* Carries Created Date

Language constant CUSTOM\_LANGUAGE\_CARRIES Created By Select a User.

Hidden on phone ☐ Yes ☒ No Modified Date

Width 10% Modified By Select a User.

Extra field Carries ID 0

Status \* ☒ Published ☐ Unpublished

- **Name:** The name of new column.
- **Language constant:** Language constant for the name of this column. This can be useful when there more than 2 languages in your back-end and you want to different names based on the current language. You can use Language Manager to add your custom language constant. If this field is empty, the Name field is used as column name.
- **Hidden on phone:** Show or hide this column on phone (by adding “hidden-phone” CSS class of Bootstrap 2).
- **Width:** The width of column in item list. Example: if you want column has 300px width, you enter “300px”; if you want it to take 50% of the item table, you enter “50%”.
- **Extra field:** The K2’s extra field which column displays info for.
- **Status:** Published column is showed in item list, unpublished column is not.

## 3.2 Change ordering

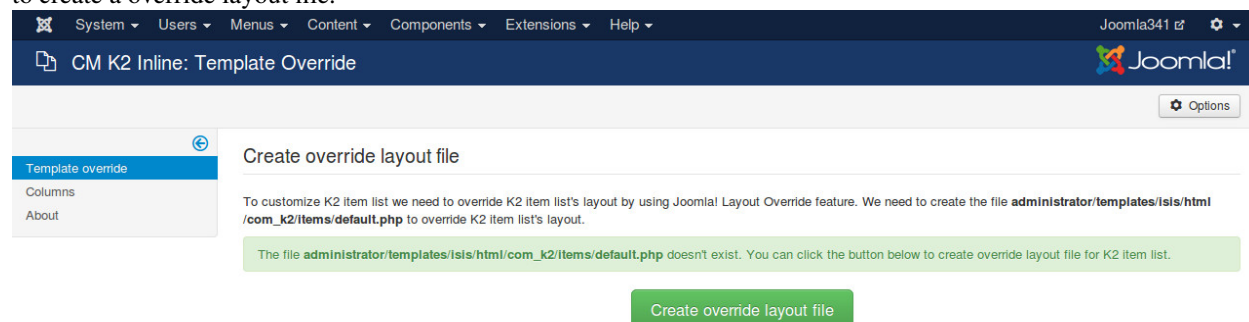

To change the columns’s ordering, you sort the column list by ordering, drag and drop the icons in the first column. This is the same to changing ordering in other Joomla! core extension like Categories, Content (Articles),...

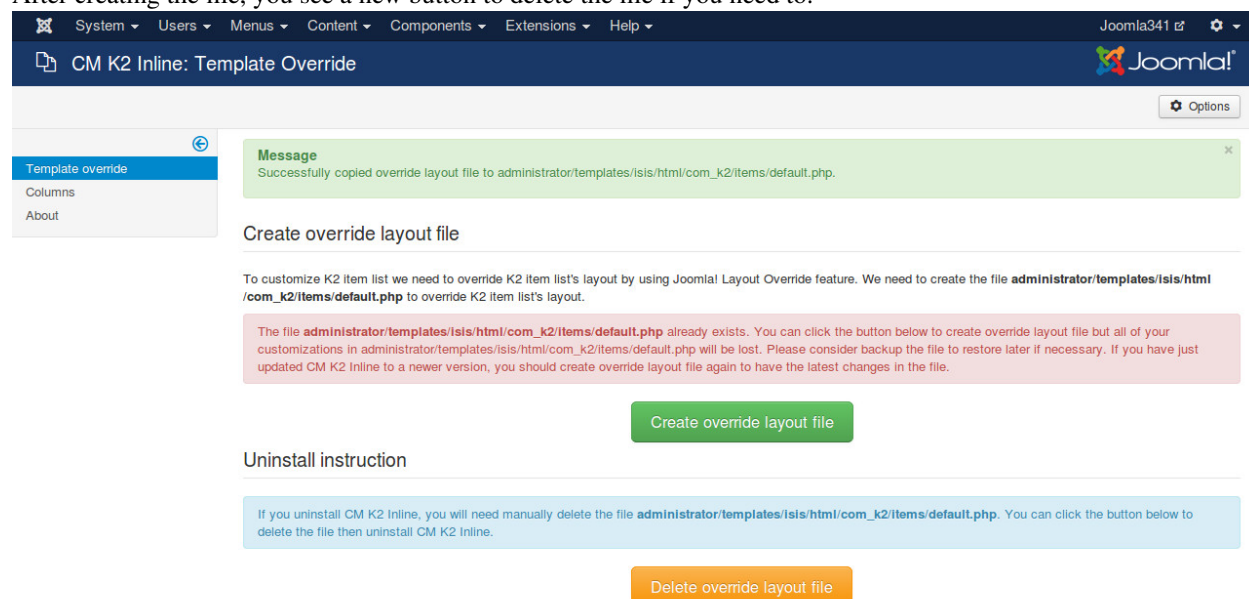

## Template override

To customize K2's layout, we need to create override layout file in your template. CM K2 Line has a tool for you to do this without file manager or FTP access.

Access “Template override” item in the left sub-menu of CM K2 Inline, click on “Create override layout file” button to create a override layout file.

After creating the file, you see a new button to delete the file if you need to.

## K2 item list

After creating columns for extra fields and override layout file, you can check K2's item list to see the result.

The screenshot shows the Joomla! K2 Items list view. The table has the following columns: Title, Published, Category, Carries, Chip, Imported Date, and Sale Price. The data row shows an iPad Air 2, published, in the iPad category, with carriers at&t, Sprint, T-Mobile, and Verizon, and a chip description. The values for Chip, Imported Date, and Sale Price are shown with dashed bottom borders.

	Title	Published	Category	Carries	Chip	Imported Date	Sale Price
<input type="checkbox"/>	iPad Air 2	<input checked="" type="checkbox"/>	iPad	at&t Sprint T-Mobile Verizon	A8X chip with 64-bit architecture and M8 motion coprocessor	2015-06-12	\$499

The values of the extra fields are showed in the item list with dashed bottom border. If extra field has empty value, the word “Empty” is showed instead (you can change it in the language file).

The screenshot shows the Joomla! K2 Items list view with inline editing enabled. The table has the same columns as before, but the values for Chip, Imported Date, and Sale Price are now shown with blue arrows and X buttons for editing.

	Title	Published	Category	Carries	Chip	Imported Date	Sale Price
<input type="checkbox"/>	iPad Air 2	<input checked="" type="checkbox"/>	iPad	<input checked="" type="checkbox"/> at&t <input checked="" type="checkbox"/> Sprint <input checked="" type="checkbox"/> T-Mobile <input checked="" type="checkbox"/> Verizon	A8X chip with 64-bit ar <input checked="" type="checkbox"/>	2015-06-12 <input checked="" type="checkbox"/>	\$499 <input checked="" type="checkbox"/>

To edit extra field inline, you click on its value, to save your change you click on the arrow button, to cancel you click on the X button.

### 5.1 Batch edit

You can add or edit an extra field for many K2 items at once.

The screenshot shows the Joomla! K2 Items management interface. The top navigation bar includes links for System, Users, Menus, Content, Components, Extensions, and Help. The main header displays the K2 logo and the Joomla! logo. Below the header is a toolbar with buttons for Toggle featured state, Publish, Unpublish, Move, Copy, Edit, New, Trash, Import Joomla! content, and Parameters.

The left sidebar contains a list of navigation links: Items (selected), Categories, Tags, Comments, Users, User Groups, Extra Fields, Extra Field Groups, Media Manager, and Information.

The main content area features a 'Batch edit' section. It includes a filter input, 'Go' and 'Reset' buttons, and several dropdown menus for selecting featured state, category, publishing state, and language. Below these is a table for selecting items and editing extra fields. The table has columns for Carries, Chip, Imported Date, and Sale Price. The 'Carries' column shows a list of carriers (at&t, Sprint, T-Mobile, Verizon) with checkboxes and a save button.

Below the 'Batch edit' section is a list of items. The list has columns for Title, Published, Category, Carries, Chip, Imported Date, and Sale Price. Two items are listed: iPad mini 3 and iPad Air 2, both with 'at&t' as the carrier and 'A8X chip with 64-bit architecture and M8 motion coprocessor' as the chip.

In the item list, you select the items you want to change extra field's value. Click "Batch edit" on top of the list to show the extra fields. Enter or select value for an extra field and click the arrow button to save. You can continue add/edit value for other extra fields or refresh the page to see the changes.

## 5.2 Notification

When you save extra field's value, there is a notification pop-up telling you if the value is saved successfully or there is any error occur.

By default notification pop-up is showed at the bottom right of the page and disappears in 3 seconds, you can customize them in the component's configuration.

## Configuration

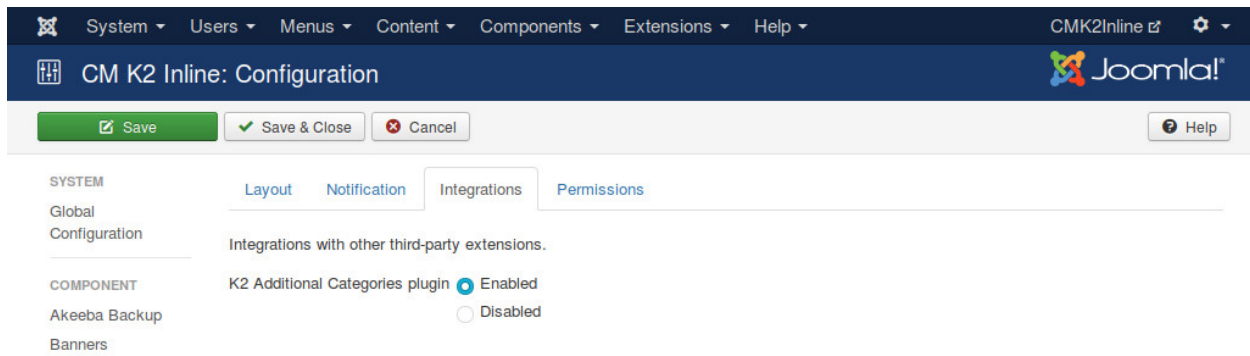

To configure the component, you click on the Options button on the right of the toolbar when you are in the pages of CM K2 Inline (Template override, Columns, About).

The screenshot shows the Joomla! administration interface for the CM K2 Inline component configuration. The top navigation bar includes System, Users, Menus, Content, Components, Extensions, and Help. The main header displays 'CM K2 Inline: Configuration' and the Joomla! logo. Below the header is a toolbar with 'Save', 'Save & Close', 'Cancel', and 'Help' buttons. The left sidebar lists the configuration hierarchy: SYSTEM (Global Configuration) and COMPONENT (Akeeba Backup). The main content area has four tabs: Layout, Notification, Integrations, and Permissions. The 'Layout' tab is active, showing 'Settings for layout.' with a single setting: 'Text's max length' set to '100'.

Text's Max Length option in Layout tab gives you ability to set how long the text of Text, Textarea and Link extra field type is display in item list. If the text is longer than the length you set, it will be truncated, 3 dots are appended to the end. This prevents long texts from breaking your item list when they are displayed in full.

This screenshot shows the 'Notification' tab of the CM K2 Inline configuration page. The top navigation and header are identical to the previous screenshot. The left sidebar now highlights 'CM K2 Inline' under the COMPONENT section. The main content area shows 'Settings for success: and failure notifications when editing inline.' with two settings: 'Notification position' and 'Timeout (seconds)'. The 'Notification position' setting has a list of radio button options: Top, Top left, Top center, Top right, Center (which is selected), Center left, Center right, Bottom, Bottom left, Bottom center, and Bottom right. The 'Timeout (seconds)' setting is set to '3'.

There are 2 options that you can configure for notification: the position of notification pop-up and how many seconds it appears on the page.

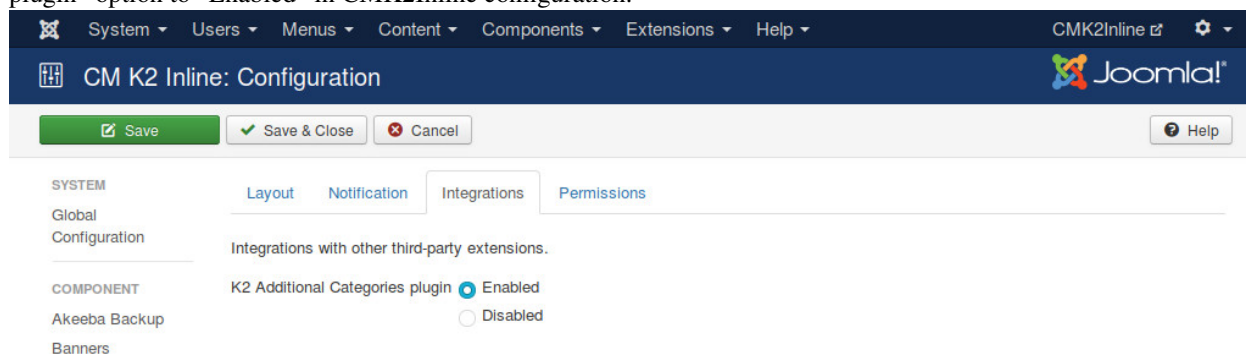

Integrations tab is where the options for the integrations with other Joomla! extensions are placed. At the present CMK2Inline only integrate with Additional Categories for K2 plugin.

## Additional Categories for K2 integration

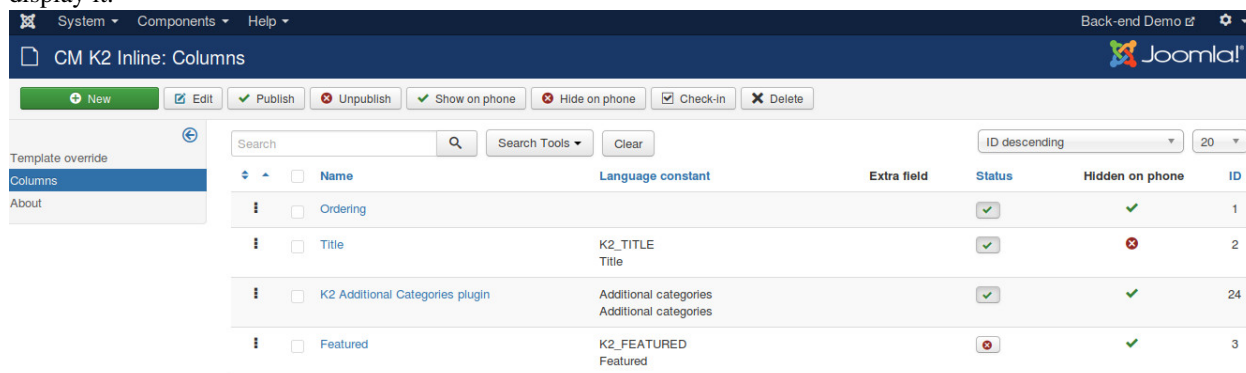

By default K2 only allows us to add an item to 1 category. Additional Categories for K2 plugin helps us to add K2 item to many categories. You can download and find out more about this plugin at <http://www.netpin.gr/extensions/item/1-k2-additonal-categories>.

CMK2Inline has an integration with Additional Categories for K2 to edit additional categories inline right in K2 item list.

To enable this integration you need to install Additional Categories for K2 plugin, set “K2 Additional Categories plugin” option to “Enabled” in CMK2Inline configuration.

Go to CMK2Inline’s Columns, enable “K2 Additionl Categories plugin” column and move it to where you want to display it.

Go to CMK2Inline’s Columns, enable “K2 Additionl Categories plugin” column and move it to where you want to display it.

The column for displaying and editing additional categories are displayed now in K2 item list.

<input type="checkbox"/>	↕	Title	Additional categories	List Price	Sale Price	Carriers	Chip	Imported Date	Internet Access	Storage Capacity	Extra Technical Details	Detail URL

---

### Update

---

You can update CM K2 Inline with Joomla!'s Extension Manager, the same way you update other Joomla! extensions.

After you update, you should go to Template override section in CM K2 Inline to click “Create override layout file” to update the override layout file in your template's override folder. This makes sure you have the latest code, otherwise there would be errors.

---

## **Uninstallation**

---

You can remove CM K2 Inline with Extension Manager. Before you uninstall, you need to go to Template override section and click “Delete override layout file” button to delete the override layout file in your template’s override folder.

If you forget deleting override layout file before you uninstall CM K2 Inline, you still can delete it manually by using file manager in your hosting control panel or FTP client. The file is located at administrator/templates/TEMPLATE NAME/html/com\_k2/items/default.php, replace TEMPLATE\_NAME with the name of your default back-end template, if you use the default back-end of Joomla! the file path is administrator/templates/isis/html/com\_k2/items/default.php.

If override layout file still exists in your template’s override folder after you uninstall CM K2 Inline, you will have errors in your K2’s item list.

---

### Translation

---

If you need to translate CM K2 Inline to other languages, you can find the English language files at:

- administrator/components/com\_cmk2inline/language/en-GB/en-GB.com\_cmk2inline.ini
- administrator/components/com\_cmk2inline/language/en-GB/en-GB.com\_cmk2inline.sys.ini

If you just want to change some words or sentences, you can use Joomla!'s language override function (Extensions -> Language Manager -> Overrides) to find and override them, your overrides are not lost when you update CM K2 Inline.

---
